

SPECTAIRE

Who We Are:

Spectaire provides a complete road emissions measurement solution enabling our customers to accurately report their entire CO2e footprint.

Benefit We Provide:

Newer model trucks, that are well serviced, can produce measured tailpipe emissions 50-70% less than standard online calculators. Spectaire can show this emissions reduction in compliance with modern emissions reporting standards.

Our Platform:

AireCore is an integrated hardware, software, analysis, and certification tool that uses mass spectrometry to measure emissions at the source, in real-time.

Spectaire

In order to improve air quality, understanding, measuring, and reporting air content is essential. Our Chief Scientific Officer, Dr. Brian Hemond PhD - M.I.T. has invented the world's only affordable, portable, and rugged mass spectrometer capable of measuring real time tail pipe emissions on a moving vehicle.

AIRECORE:

\$2,000 PER SYSTEM

\$1,000 ANNUAL SUBSCRIPTION

INSTALLATION, CERTIFICATION,
MONITORING, REPORTING,
MAINTENANCE ALL INCLUDED

01. Meet and Exceed Emissions Reduction Targets

Audited emissions reports enforce compliance towards emissions reduction goals.

02. Leverage Existing Investments

New trucks produce less emissions. Let AireCore prove your results.

03. Earn Carbon Credits

Spectaire can produce \$5,000+ per truck annually in carbon credits (where applicable).
